

PEST CONTROL RESEARCH

THE WaxTag

NZ Patent # 516900

for SUPERIOR POSSUM MONITORING in ALL ENVIRONMENTS

- * Nationally approved NPCA (National Possum Control Agencies) WaxTag protocol defines its use for possum monitoring
- * Landcare Research NZ Ltd based trials show the WaxTag Bite Mark Index (BMI) is significantly correlated to possum density ($r^2 = 0.95$), and was the most effective device for possum detection
- * 30-40% more cost-effective than leg-hold traps for possum monitoring and provides better detection of possums than leg-hold traps
- * Does not threaten ground birds (such as kiwi & weka) or cats and dogs so time consuming raised sets not required
- * Used by DOC and Regional Councils nationwide
- * Calibrated with RTCI
- * Humane, cost-effective, time efficient and superior functionality
- * Light, robust and simple for monitoring in the most remote & rugged locations
- * Perfect for use where children and domestic pets are present
- * Locally designed and manufactured

PEANUT BUTTER WaxTag for RODENT detection

- * Proven as an excellent method to detect rodents for bio-security incursion and surveillance programmes on mainland and offshore island sanctuaries
